

TRIPADVISOR.COM AWARDS TOP TRAVELLER SATISFACTION RATING TO A HOTEL CONSTRUCTED USING INTEGRASPEC ICF

Comfort Inns & Suites in Tifton, Georgia, USA is consistently ranked Number 1 out of seventeen hotels in the town by Trip Advisor, an online accommodation review site that attracts nearly 32 million worldwide visitors per month.

A recurring theme in all the Trip Advisor reviews is the amazing peace and quiet enjoyed by hotel guests – quite surprising, when you realise that it's located right next to one of America's busiest interstate highways!

This peace and quiet can be explained by the fact that the exterior and interior walls of the hotel were constructed using IntegraSpec ICF, combined with concrete/steel composite floors. This provides impressive sound insulation for each room – the room-to-room STC (Sound Transmission Class) rating of more than 50 ensures a quiet night's rest, with no noise disturbance from neighbouring rooms or the nearby highway for that matter.

One Trip Advisor review says it all:

“We stayed at this hotel after reading all the glowing reviews. It lived up to and exceeded these reviews. Our room was very clean and very quiet. We need the quiet as my husband has severe sleep problems. Due to many bad previous experiences, he dreads staying in hotels. All he can say about our experience is that this is how a hotel should be – it was even quieter than at home....”
